

DIN-Power F048MR-3,0C1-1-clip

Part number	09 06 348 2951
Specification	DIN-Power F048MR-3,0C1-1-clip
HARTING eCatalogue	https://b2b.harting.com/09063482951

Image is for illustration purposes only. Please refer to product description.

Identification

Category	Connectors
Series	DIN 41612
Identification	Type F
Element	Male connector
Description of the contact	Angled
Features	lead-free Colour deviations and speckles permitted

Version

Termination method	Reflow soldering termination (THR)
Connection type	Motherboard to daughtercard Extender card PCB to cable
Number of contacts	48
Contact configuration	Rows z, d and b, positions 2, 4, , 30, 32
Coding	Hole coding Shroud coding Coding with loss of contacts D20 coding
PCB fixing	With fixing flange With snap-in clip

Technical characteristics

Contact rows	3
Contact spacing (termination side)	2.54 mm 5.08 mm

Technical characteristics

Contact spacing (mating side)	3.81 mm 5.08 mm
Rated current	6 A
Rated current	Rated current measured at 20 °C, see derating curve for details
Clearance distance	≥1.6 mm
Creepage distance	≥3 mm
Insulation resistance	>10 ¹² Ω
Contact resistance	≤15 mΩ
Limiting temperature	-55 +125 °C (during reflow soldering max. +240 °C for 15 s)
Insertion and withdrawal force	≤75 N
Performance level	1 acc. to IEC 60603-2
Mating cycles	≥500
Test voltage U _{r.m.s.}	1.55 kV (contact-contact)
Isolation group	II (400 ≤ CTI < 600)
PCB thickness	1.6 mm ±0.2
Hot plugging	No
Material properties	

Material (insert) Thermoplastic resin, glass-fibre filled Colour (insert) Beige Material (contacts) Copper alloy Noble metal over Ni Mating side Surface (contacts) Sn over Ni Termination side Material flammability class acc. to UL 94 V-0 RoHS compliant ELV status compliant China RoHS е **REACH Annex XVII substances** Not contained REACH ANNEX XIV substances Not contained **REACH SVHC substances** Not contained California Proposition 65 substances Yes Lead California Proposition 65 substances Nickel

Material properties	
Requirement set with Hazard Levels	R26
Specifications and approvals	
Specifications	IEC 60603-2
UL / CSA	UL 1977 ECBT2.E102079 CSA-C22.2 No. 182.3 ECBT8.E102079
Railway classification	F4/I3 acc. to NFF 16-101/102
Commercial data	
Packaging size	20
Net weight	22.84 g
Country of origin	Germany
European customs tariff number	85366990
GTIN	5713140195509
eCl@ss	27460201 PCB connector (board connector)

Current carrying capacity

The current carrying capacity of the connectors is limited by the thermal load capability of the contact element material including the connections and the insulating parts. The derating curve is therefore valid for currents which flow constantly (nonintermittent) through each contact element of the connector evenly, without exceeding the allowed maximum temperature.

Measuring and testing techniques acc. to IEC 60512-5-2

Hole coding (without loss of contact)

To avoid cross-plugging of adjacent connectors a coding system is required.

Drill out the male connector at pre-centered point according to the sketch. Use the setting tool 09 99 000 0103 to insert the coding pin 09 06 000 9950 into the existing hole in the female connector.

Shroud coding (without loss of contact)

To avoid cross-plugging of adjacent connectors a coding system is required.

Insert the code key 09 06 001 9919 into one of the keyways of the female connector as shown in the drawing. Break out the corresponding area of the male shroud. Connectors coded this way can only be applied in a minimum rack spacing of 20.32 mm.

Coding with loss of contacts To avoid cross-plugging of adjacent connectors a coding system is required. The coding is achieved by means of a code pin which is inserted into the selected chamber of the female connector (the contact cavity must be filled with a female contact!). The opposite male contact must be removed with the help of the specially designed tool. It's recommended to use at least 3 pins. Coding pin 09 04 000 9908 Removal tool for male contacts 09 99 000 0038

Quantity of solder paste

Before the components are assembled, solder paste must be applied to all the solder pads (for connecting surfacemount components) and the plated through holes. To ensure that the plated through holes are completely filled, significantly more solder paste must be applied than traditional solder pads on the pcb surface. There are numerous calculation methods available which are complicated to apply. The following rule of thumb has proved valuable in practice.

Required volume of paste = 2 (Volume of plated through hole - Volume of the connector termination in the hole) Comment: the multiplier "2" compensates for solder paste shrinkage during soldering. For this purpose, it was assumed that 50% of the paste consists of the actual solder, the other 50% being soldering aids.

Soldering instructions

THR (ThroughHoleReflow) connectors are designed to be used in a reflow oven together with other SMD (SurfaceMountDevice) components. In the process, called as well "Pin in Hole Intrusive Reflow", the connectors are inserted into plated through holes in a comparable way to conventional component mounting. All other components can be assembled on the pcb surface.

The length of the connector contacts should be such that they protrude by no more than 1.5 millimetres after insertion to the pcb. Each contact collects solder on its tip as it penetrates the solder paster in the hole. So if the contact is too long, this solder would no longer be able to reflow back into the plated through hole by capillary action during the soldering process, therefore the quality of the soldered connection would suffer as a result.

Product data sheet 09 06 348 2951 DIN-Power F048MR-3,0C1-1-clip

Mating conditions

To ensure reliable connections and prevent unnecessary damage, please refer to the application data diagrams. These recommendations are set out in IEC 60603-2.

The connectors should not be coupled and decoupled under electrical load.
